IT'S NOT A TRANSACTION. IT'S A JOURNEY.

Who we **are**

Pedestal, a woman/minority-owned business, goes beyond simply providing IT services. We offer the latest solutions for your IT needs or challenges: business intelligence/data analytics, networking, cloud services, automation, infrastructure, collaboration, security, and end user computing — all driven by a team of leading technology experts. Our team partners with you to design, deploy, and manage IT products and services customized to your business and your goals, big or small. And of course, innovative security and automation are integrated into all we do.

Our **process**

This is the **Pedestal Way**

“At Pedestal Technology, we speak your language — from the data center to the boardroom. Opening channels of communication that open the doors of opportunity for your business success.”

Our offerings

Business Intelligence & Data Analytics

Data is king. Good decision making not only relies on data, but data that is accessible, reliable, and complete. We help you make sense of your data across your range of systems and platforms by building relationships among your data lakes and warehouses.

Networking

The accessibility of your data relies on all the pieces of your network working together to keep the road clear and enhancing your ability to see roadblocks ahead. From traditional networking to cloud-based and virtualized solutions, Pedestal will design the right solution for your business needs.

Cloud Services

The idea of not having to house and maintain servers, the immediate scalability, and the ability to make choices that are implemented quickly, is appealing. Our cloud services help you track, measure, and process any unit of work through a set of integrated cloud IT services and management applications that are easy to deploy and access any time, any place. Using predictive analytics, we create tool sets unique to your business needs.

Automation

Automation is integrated into all we do. We use smart workflow tools that automate and collate manual processes into simple, regular workflows. We incorporate machine learning that uses algorithms to make decisions by identifying patterns in large amounts of data, including predictive maintenance in manufacturing factories, and to market segmentation. Our team can create robotic process automation (RPA) that automates repetitive, manual tasks — everything from timesheet submission to order and invoice processing.

Infrastructure

Your infrastructure represents the entire collection of hardware, software, networks, data centers and warehouses, as well as everything required to operate, manage, and support those services. We know that ensuring each device is patched, up to date, and in good working order is a big job. Our infrastructure services aim to bring cloud and on-premises resources together and help you support business objectives with the least amount of overhead.

Collaboration

Ensuring your clients can get help whenever they need it and your employees can easily reach each other is a critical part of doing business. Your collaboration solutions may be a combination of platforms that integrate voice, call routing with TELCO provider, chat/IM, audio, meeting platforms, and teleconference. Our solutions synthesize the various moving pieces.

Security

Security starts with education. We plan and execute on policies that protect the structure and future of your business from both network and cybersecurity threats. Our proactive measures in both policy and innovative tools help you get ahead of the issues before they happen. We provide you with reactive remediation efforts and agile tools and solutions, if needed. Security is at the heart of everything we do.

End User Computing

Supporting the end users and their connected devices is often where a significant portion of IT budget lands. Shrink that dollar figure with a variety of solutions to make support easier while enhancing the user experience by investing in systems that are scalable, reasonably priced, and intuitive.

Each of these offerings can also be provided as a service.
Let us put the Pedestal Difference to work for you!
